

# **ROAD BROOMER**

## **HYDRAULIC ROAD BROOMER- MODEL:SRB-200**

### **Features**

- \* Operated by towing with tractor or forklift.
- \* 2000 mm clear sweeping width.
- \* Dust sweeps away on left hand side.
- \* Adjustment on both sides as per the slope of the surface.
- \* Nylon bristle brush for proper cleaning.
- \* Three point linkage system for quick mounting and towing.
- \* Screws for adjustment of pressure on brushes.
- \* Easy to operate and maintain.

### **Construction & Operation**

The Road Broomer unit is tractor towable and used for cleaning the pavement subbase before laying hotmix asphalt or concrete mix. The unit is constructed from pressed steel consisting of broom shaft, two heavy duty wheels, hydraulic motor and adjustment screws. Hydraulic motor gets the power from the hydraulic pump of tractor. The motor in turn rotates the broomer shaft. The advantage of hydraulic drive is that the broomer shaft can be rotated even when the tractor is stationary. The broomer sweeps away the dust towards the left hand side of the machine.
